

## Web Development Project:

### Task 1 : Product Landing Page

Product landing page you will use columns and align the components of the landing page within columns. Basic editing tasks like cropping images and making use of design templates are also covered in this.

Skills Required – CSS, Image editing.

Internship report

Skills Required:

**CSS:** You will need to use Cascading Style Sheets (CSS) to style and layout the components of the landing page. This includes adjusting the size, color, and positioning of elements.

**Image Editing:** Basic image editing skills are required for tasks like cropping images. This might involve using tools like Adobe Photoshop or online image editing tools.

Tasks:

**Product Landing Page:** The main task is to create a landing page for a product. This involves organizing content and elements on the webpage, ensuring a visually appealing layout.

**Use of Columns:** Columns can be employed to structure the layout of the landing page. This helps in organizing different sections and aligning components effectively.

**Align Components:** Proper alignment of text, images, buttons, and other elements within the columns is essential for a clean and professional appearance.

**Basic Editing Tasks:** Tasks such as cropping images and potentially applying other basic edits to ensure they fit well within the design.

**Design Templates:** The mention of design templates implies that predefined styles or layouts might be utilized for consistency or efficiency.

Internship Report Documentation:

It appears that you might also be required to document your internship experience. This documentation could include details about the tasks you performed, challenges faced, solutions implemented, and the skills you developed during the internship.

Recommendations:

Ensure a responsive design so that the landing page looks good on various devices.

Optimize images for web performance to ensure faster page loading.

Test the landing page on different browsers to ensure cross-browser compatibility.

Follow best practices for web accessibility to make the page usable for people with disabilities.
